WE CONTINUE TO GROW AND ARE LOOKING FOR YOU AS A
DATA SCIENTIST (F/M/D)

PLACE OF WORK: ABSAM

Are you intellectually curious with all things data and you see your calling in bringing these treasures closer to us and supporting the organisation in data-driven decision making? If you are a very skilled communicator who focuses as much on the delivery of insights, as you do on the underlying technical solution and combine creativity, analytical skills and research methodology, then we have the right job for you.

POSSIBLE WORKING DAY
Your day starts with a cross-departmental project meeting where you work on the collection and unification of various data sources to create real-time customer profiles. You support in building the data infrastructure required for optimal extraction, transformation and loading of the data – a task where strong analytical skills, detail-orientation and solid understanding of diverse datasets are needed. In all your actions always have in mind how it helps the company as well as discovering patterns that are not obvious. Back at your desk you continue working on a customer segmentation model, in particular on how to tell a story with your findings in the presentation at a project meeting next week. In the afternoon you meet with a colleague from e-commerce to discuss the potential of a machine learning model to identify and target existing customers with a high-likelihood to purchase. You finish off your day by keeping yourself up to date on industry trends, best practices and emerging methodologies, to proactively help drive our market insight work within the company.

SWAROVSKI OPTIK brings people closer to the preciousness of the moment and shares with them the joy of observing and the fascination for the beautiful and hidden. The world belongs to those who can see beauty. Experience the moment. SEE THE UNSEEN.
